

## ABSTRACT OF THE DISCLOSURE

A management terminal stores representative information indicating a plurality of representatives who are in charge of an organization that a user belongs to, and selection information  
5 indicating a selected representative that the user selected from the plurality of representatives. The management terminal generates data of a first screen, which displays the selected representative that the selection information indicates, and which is possible for the user to select another representative than the selected representative.  
10 Then, the management terminal sends the generated data of the first screen to a user terminal, which is operated by the user. The user terminal presents the first screen to the user, using the provided data of the first screen.
